```cpp
#include<string>
using namespace std;

class Car
{
public:
    string license;
    int num;
    Car(string s="", int n = 0)
    {
        license = s;
        num = n;
    }
    void display()
    {
        cout <<license<<" was moved "<<num<<" times while it was here"<<endl;
    }
};
```
